

Arctiq Acceleration Program for Red Hat Ansible Automation Platform

Platform Engineering

Streamline Your IT Operations with Arctiq Services

Red Hat Ansible Automation Platform (AAP) allows organizations to automate their IT operations, streamline workflows, and improve efficiency. The platform is built around the automation framework Ansible and includes additional features and components to support enterprise-level automation needs. AAP focuses on security, compliance, scalability, and the ability to manage complex infrastructure and application environments. It empowers organizations to achieve consistency in their IT operations by automating a wide range of tasks and workflows.

Is Ansible Automation Platform right for you?

- You need to have a paid subscription to Red Hat Ansible Automation Platform which gets you access to support, updates, and additional features
- Your organization has a DevOps roadmap as part of its digital transformation journey
- You are looking to improve developer experience
- You need to meet certain business objectives to stay competitive in today's technology-driven landscape

Common Challenges

Operational Inefficiency

Manual tasks and the potential for human error

Slow Time-To-Market

Lengthy application and services deployment cycle

Consistency

Lack of repeatability and reusability, limiting scale

Security and Compliance

Meeting regulatory requirements and maintaining data security

Developer Happiness

Lack of automated processes

Accelerate your AAP Adoption

Arctiq Accelerator for Ansible Automation Platform (AAP) is a services starter package developed to get you using the tools and the platform, following industry best practices, creating repeatable scripts and reusable playbooks. Arctiq will help you architect and deploy Ansible Automation Platform and assist the operations team with basic integrations, including Git and playbook testing.
