

# Arctiq Vault Acceleration Program (VAP)

## Accelerate Your HashiCorp Vault Adoption with Arctiq

Vault provides identity-based security, automatically authenticating and authorizing access to secrets and sensitive data. With its complexity, expert guidance is crucial for effective integration. Arctiq's Vault Acceleration Program (VAP) is crafted to unlock the full value of HashiCorp Vault, embodying our philosophy of delivering success and peace of mind. We are committed to clearing roadblocks, and driving value from your technology investment. Our approach ensures repeatable success; we don't just provide solutions, we teach customers how to operate and scale Vault independently.

## Is VAP right for you?

### Evaluating Vault Enterprise

Vault OSS user assessing the investment in Vault Enterprise

### Managing Growth

Experiencing organizational complexity due to growth and expanding infrastructure

### Compliance and Governance

Exploring Vault Enterprise features for compliance or governance needs

### Adoption Challenges

Vault Enterprise user facing adoption challenges or stalled rollout

### Strategic Consultation

Seeking strategic or tactical consultations for broader organizational Vault adoption

## Common Challenges

- Static credentials and security tools that create long-lived exposure
- Secrets sprawled throughout existing infrastructure with no central control
- Credentials stored as plain text, or publicly accessible, leaving your organization vulnerable
- Manually created and managed Kubernetes credentials that become stale, fail, or go missing
- No audit trail for secret access, making compliance and forensic review difficult

## Arctiq's Expertise

- HashiCorp Hyper-Specialized Partner
- HashiCorp Security Competency
- Vault Certified Presales and Delivery Consultants
- Overall HashiCorp Technical and Sales Certifications across the delivery team

# Your Vault Acceleration Journey with Arctiq

Arctiq Vault Acceleration Program (VAP) is a service package developed to be a guide for your Vault adoption and integration journey. Our approach is specifically designed to assess and progress your environment and your organization's skill maturity utilizing a Minimum Viable Product (MVP) methodology. This approach enables easy adoption of HashiCorp Vault, enhancing the probability of successfully implementing and operationalizing Vault across the entire organization.

## Program Overview

Duration  
2-4 weeks\*

### Phase 1

#### Discovery and Interviews

- Document current state architecture
- Document existing use cases and usage patterns
- Identify current users and operators

### Phase 2

#### Create Deliverables

- Vault Maturity Assessment
- Vault Adoption Plan
- Customer Success Plan— including Reliability and Training Plan

### Phase 3

#### Deliverables and Walk Through

- Health Check Report and Executive Readout
- Roadmap: Vault Implementation and Adoption Plan
- Statement of Work for services to deliver on roadmap

\*Exact timeline will be determined based on availability, readiness, and scope

### Health Checks

Deep dive discovery sessions to uncover improvement and focus areas, laying a stronger foundation before deployment begins.

### Foundation

Centralized and dynamic secrets management with a unified service catalog, establishing the core Vault architecture your organization will build on.

### Standardize

Enable your organization to confidently adopt and operationalize the tooling beyond the initial engagement, with consistent policies and access controls in place.

### Integrate

Make Vault part of your organization's everyday operations through application and user integrations that demonstrate the platform's full value.

### Scale

Automation, best practices, and developer team enablement — typically delivered through a retainer or statement of work focused on expanding Vault across the organization.

## Business Impact

- Reduced operational cost through centralized secrets management and automated credential rotation
- Increased efficiency by eliminating manual secrets handling and saving developer time
- Enhanced security posture through Workload Identity Federation, automated credential rotation, and AI-driven detection of leaked secrets
- Reduced risk of a breach through dynamic secrets, centrally managed and standardized credentials, automated secret rotation, and encryption at rest

## Arctiq Advantage

- Expert guidance
- Consultative services
- Driving adoption for Vault and DevSecOps at scale

- Prescriptive rollout documentation
- Achieving business and technical objectives

▶ Unlock the full potential of HashiCorp Vault with Arctiq's Vault Acceleration Program — accelerate adoption, enhance security, and optimize integration effortlessly.
