

Securing the Cloud with Confidence

Organizations today are navigating increasingly complex, multi-cloud environments while under constant pressure to secure sensitive data, meet regulatory requirements, and reduce operational risk. These key challenges include:

Cloud Visibility

Maintaining comprehensive insight into workloads, serverless functions, and containers across AWS, Azure, and GCP.

Risk Prioritization

Distinguishing critical threats from thousands of false positives to focus on issues that truly matter to the business.

Speed and Accuracy

Detecting and remediating misconfigurations, vulnerabilities, and compliance risks before they become incidents.

Operational Confidence

Restoring trust in detection and alerting systems with actionable insights instead of overwhelming noise.

Solution Overview

By combining Wiz's Cloud Security Platform with Arctiq's ServiceIQ methodology, enterprises gain a trusted path to secure cloud adoption and operations. The Wiz Cloud Security Platform enables organizations to build faster in the cloud, bringing together security, development, and DevOps in a self-service model designed for the scale and speed of modern cloud environments. With agentless deployment, Wiz delivers deep, real-time visibility into workloads, correlates vulnerabilities and misconfigurations, and prioritizes risks that truly matter to the business.

Wiz Code

Unify security from code to cloud. Trace vulnerabilities from deployment to source code, identify pipeline misconfigurations, and prevent vulnerabilities from ever reaching runtime.

Wiz Cloud

Provides agentless visibility and cloud security posture management (CSPM) across AWS, Azure, and GCP. It detects misconfigurations, vulnerabilities, and IAM risks, then prioritizes them using the Wiz Security Graph to reduce noise and highlight true business risks.

Wiz Defend

Stay ahead of threats with real-time, runtime-level threat detection that can detect threats faster, give you the context you need, and reduce the blast radius with immediate prevention and response.

Service Overview

Turning on the lights is just the beginning. Arctiq helps our clients turn signal into solutions. Our team combines Wiz expertise with our best-in-class cloud engineering and application security talent to help you manage vulnerabilities and drive organizational change to reduce them going forward.

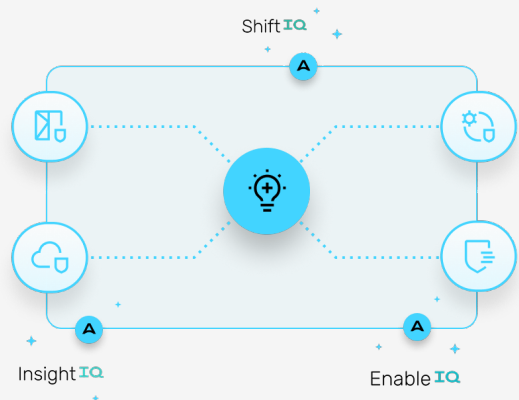

Cloud Security Assessments
leveraging Wiz for rapid posture evaluation and gap identification.

Enablement Services to integrate Wiz into the way you work, with dashboards, notifications, and integrations that enable your workflows.

Vulnerability Management
from immediate triage, to program development, or managed services, Arctiq can meet your business where it is.

Together, Arctiq and Wiz allow businesses to deliver a cloud and application security program that gets out of the way while delivering powerful visibility and meaningful solutions.

- Achieve 100% visibility into cloud assets, identities, and configurations.
- Dramatically reduce noise by correlating vulnerabilities, misconfigurations, and exposure into clear risk cases.
- Give security, engineering, and development teams strategic guidance and tactical support in prioritizing and eliminating critical business risks.
- Drive real posture improvement to meet compliance, security, and regulatory requirements.

The Arctiq Advantage

Proven Expertise

Arctiq's engineering team brings certified resources on Wiz, GCP, Azure, and AWS to ensure quality and expertise.

Full Lifecycle Approach

Arctiq's ServiceIQ framework supports you from adoption to triage, vulnerability management and remediation services, the business.

Business-Driven Outcomes

Solutions focus on measurable improvements in compliance, risk reduction, and operational resilience.

Trusted Partnership

Arctiq and Wiz work hand-in-hand to deliver rapid, accurate, and reliable security outcomes.

Success Story

A leading healthcare provider operating across AWS, Azure, and GCP faced mounting security challenges:

- 1 Lack of complete visibility into sprawling cloud assets.
- 2 Difficulty distinguishing true risk due to alert fatigue.
- 3 Regulatory requirements for securing sensitive health data.

During a proof of concept, Wiz connected via an agentless deployment across all environments, instantly delivering 100% visibility into assets, serverless workloads, and Kubernetes clusters. Where the client had previously been overwhelmed by thousands of alerts from legacy tools, Wiz reduced the noise to a dozen high-priority risk cases. With Arctiq's guidance, accuracy, reporting, and remediation planning became clear differentiators, restoring confidence in the client's cloud security posture.

Ready to accelerate secure cloud development?

Partner with Arctiq and Wiz to gain the visibility, speed, and confidence you need to build at cloud scale.
