

Managed Extended Detection & Response (MXDR) Service

powered by Google Security Operations

🔒 Enterprise Security

Helping Organizations Improve Their Security Posture and Fight Advanced Cyber Threats

Modern organizations face an ever-growing array of evolving security threats with significant consequences for finances, trust, and reputation. The key challenge is the ability to effectively monitor, identify, respond to, and remediate multiple simultaneous security threats.

Our Managed Extended Detection and Response (MXDR) service delivers expert, 24/7, year-round vigilance, using Google SecOps SIEM and SOAR to detect, investigate and respond to threats. This fully managed service automates security detection and response to safeguard IT infrastructure, systems, data, and more.

Security Operations Centers

Arctiq operates three Security Operations Centers strategically located across North America, ensuring comprehensive coverage and timely threat response. We offer a robust suite of services designed to fortify your cybersecurity defenses, including:

Advanced Threat Intelligence

Leverage Google Cloud and Mandiant threat intelligence for world class intelligence derived from the front lines.

Threat Hunting

Arctiq hunters proactively seek out potential threats within your environment, going beyond traditional monitoring to actively identify and neutralize risks.

Cloud-native Security Analytics

Ingest and analyze data at cloud-scale. Our analytics capabilities provide in-depth insights into security incidents, offering curated detections for advanced threats.

Automated Response:

With Google SecOps SOAR and our dedicated team, we can take swift action to respond to security incidents, ensuring timely resolution.

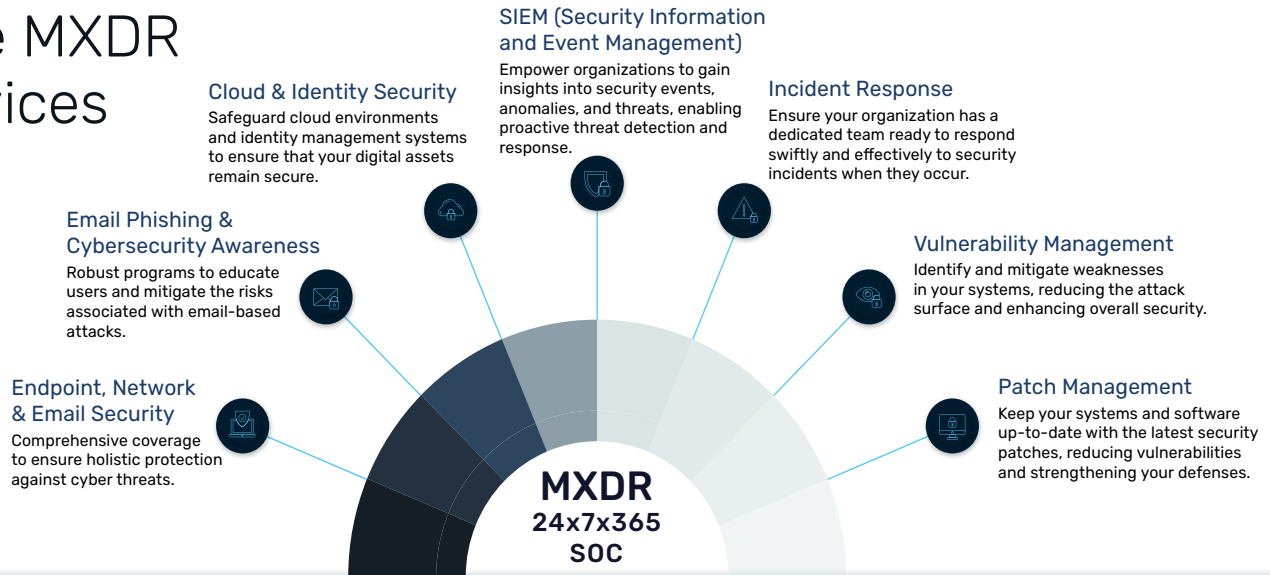

Monitoring and Alerting

With round-the-clock 'eyes on glass' coverage, we swiftly identify critical threats in near real-time, converting alerts into actionable intelligence.

Key Benefits

- Comprehensive solutions aligned with core security controls to meet stringent compliance and cyber insurance requirements
- Fast response times for security events with the ability to triage incidents
- Use of machine learning to increase efficacy of detection
- Reviews with security experts to analyze metrics, incidents, recommended security enhancements to existing toolset, and security best practices
- Access to technology experts in adjacent areas such as storage, infrastructure, data center, Microsoft platforms, and more
- Enhanced visibility into the security of users and systems including analysis of user and entity behavior analytics

Core MXDR Services

Proactive Security Consulting

We take a proactive stance in offering consulting services led by our team of seasoned security experts. Our approach involves in-depth analysis of security metrics, the formulation of targeted security enhancement recommendations, and the sharing of knowledge gained from numerous successful projects. We believe in continuous improvement and maintain open collaboration for transparency with our clients as fundamental principles of our consulting practice.

Customer Experience

At the core of our services is a commitment to delivering an exceptional customer experience. We believe in providing a white-glove experience accompanied by comprehensive metrics and reporting, including robust tools that offer deep insights into your security landscape. Our onboarding process is swift and hassle-free, with a dedicated success team and project management support to ensure a smooth transition. We also offer executive-level reporting and metrics for clear, concise insights into your environment's security activity.

Contact Arctiq Today

Transform your security with Arctiq's MXDR and experience unrivaled protection by a highly certified team.

► Partner with Arctiq to elevate your defense with 24/7 vigilance, automated detection, and proven expertise.
