CYBER RESILIENCE

Response Program Uplift

Rebuild Incident Response for the Environment You Operate Today

Most incident response plans were written for a different technology environment and a different threat landscape. Refreshing the document is not enough.

01 — THE CHALLENGE

Incident response plans drift. Cloud adoption changes the architecture. Identity becomes the new control plane. Teams turn over. Detection capabilities mature while response processes remain unchanged.

Many organizations continue operating with plans designed around outdated technologies and threat assumptions. The gap often becomes visible only when a serious incident occurs.

02 — WHY ARCTIQ

Response Program Uplift modernizes the incident response capability from the plan through execution.

Arctiq rebuilds the incident response plan, technical playbooks, runbooks, command structure, SOC-to-IR handoff, executive escalation paths, and integration with breach counsel, insurers, and forensic partners.

> Where appropriate, the rebuilt program is validated through tabletop exercises before it is needed in a real incident.

03 — ADVISORY CAPABILITIES

- Incident response plan rewrite
- Cyber incident command structure
- SOC-to-IR handoff design
- Ransomware, BEC, and identity compromise runbooks
- Cloud account takeover and third-party compromise playbooks
- Insider threat and data exfiltration response
- OT incident response planning
- Forensic readiness and log retention
- EDR, identity, cloud audit, and network telemetry readiness
- Legal and regulatory notification workflows
- SOAR and case management integration
- Versioned, exercise-tested runbooks

RUNBOOK COVERAGE

Ransomware · BEC · Identity Compromise · Cloud ATO · Insider Threat · OT · SOAR

04 — BUSINESS OUTCOMES

Organizations gain:

- ✓ An incident response plan aligned to current architecture
- ✓ Clear command and escalation structures
- ✓ Modern technical playbooks and runbooks
- ✓ Improved forensic readiness
- ✓ Better coordination across security and executive teams
- ✓ An exercise-validated response capability ready to be invoked

05 — WHY IT MATTERS

An outdated incident response plan creates false confidence. Arctiq helps organizations build a response capability designed for the technology, threats, and regulatory environment they face today.
