

# Arctiq Tribal Enterprise Solutions

Empowering sovereignty. Advancing technology.  
Strengthening community.

Every tribal enterprise has its own story, grounded in sovereignty, community, and a shared vision for growth. But as technology becomes more essential to operations, many tribal organizations are finding that traditional enterprise models do not always align with their governance, geography, and goals.

In critical sectors such as tribal government, education, gaming, and healthcare, it is essential to modernize infrastructure and operations while maintaining full control over data, decisions, and identity. Many communities still face connectivity challenges. Limited broadband, outdated systems, and remote locations make it harder to deliver digital services, support education and telehealth, and grow local economies. At the same time, protecting sensitive data and meeting compliance standards like HIPAA and PCI remain ongoing priorities for safeguarding communities and sustaining trust.

## Our Solutions

Our Tribal Enterprise Solutions are designed with cultural respect, operational understanding, and technical excellence, combining the strength of modern infrastructure with the flexibility and security that tribal organizations require.

### Dedicated Tribal Advisory and Expertise

- IT and digital transformation strategy aligned with sovereignty and governance goals
- Policy and compliance consulting for technology adoption and modernization
- Architecture design and roadmap development tailored to community priorities
- Economic development and business diversification strategies
- Funding and grant navigation to support broadband and infrastructure projects

### Infrastructure and Connectivity Modernization

- Broadband and fiber network design and deployment
- Campus modernization and network refresh programs
- Hybrid cloud and data center modernization (Azure, AWS, Google Cloud)
- Edge computing and IoT solutions for smart community initiatives
- Disaster recovery, backup, and high-availability infrastructure

## Enterprise Security and Compliance

- 24/7 Managed Security Operations Center (SOC) and MXDR services
- Vulnerability management, patch automation, and threat intelligence
- Cloud and hybrid environment security (CSPM, CNAPP, IAM)
- Network, endpoint, and email security architecture and deployment
- Compliance programs for HIPAA, PCI, and government regulatory frameworks

## Managed Services and Operational Support

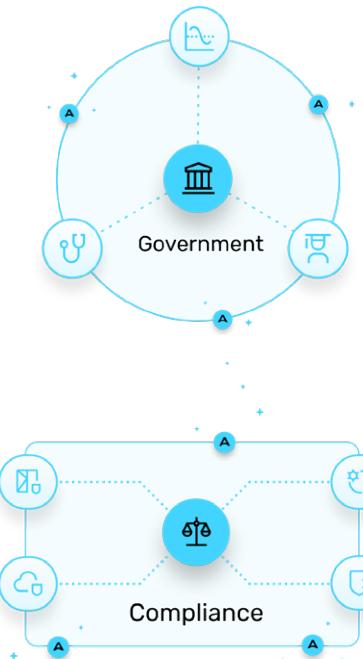

- IT service management (monitoring, patching, and asset lifecycle)
- Managed network, firewall, and endpoint protection
- Managed backup and disaster recovery services
- Cloud and infrastructure optimization through AWS/Azure management
- Help desk, user support, and escalation management

## Funding Navigation and Sustainability Planning

We help identify, apply for, and manage funding from programs such as NTIA, BEAD, and E-rate, ensuring your projects are financially sustainable beyond the grant cycle. From application support to compliance reporting, we simplify the process and help projects get off the ground faster.

## USE CASES

### Modernizing Tribal Government, Education, and Healthcare

Tribal organizations often operate across multiple sectors, from government administration to healthcare to education. A common scenario is the need to modernize disconnected systems, improve network performance, and protect sensitive information across all departments. Arctiq supports these efforts with secure infrastructure, hybrid cloud environments, and managed security services that align with compliance standards and sovereignty goals.

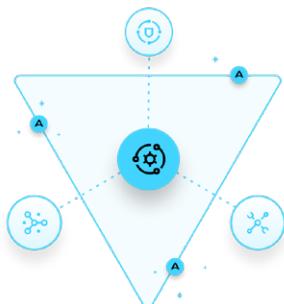

### Enhancing Security and Compliance for Gaming and Hospitality

Tribal gaming enterprises frequently require upgrades to their surveillance systems, networks, and cybersecurity defenses to meet strict regulatory requirements. Whether the goal is achieving PCI compliance, reducing risk exposure, or strengthening endpoint security, Arctiq helps design integrated security architectures that improve visibility, simplify monitoring, and prepare for audits without adding operational burden.

## Expanding Broadband Access to Support Economic Growth

Many tribes are looking to expand broadband access as a foundation for economic development. These projects may include fiber-to-the-home, wireless networks, or community internet hubs. Arctiq supports the full lifecycle of broadband infrastructure projects, from funding navigation and architecture design to network deployment and managed operations. These efforts open doors to remote work, telehealth, distance learning, and small business development.

## Managing IT Operations With Limited Resources

Smaller IT teams in tribal enterprises often struggle to keep up with patching, monitoring, and infrastructure upkeep. Arctiq offers managed services that relieve the day-to-day workload and improve overall service delivery. Whether it is monitoring endpoints, securing cloud applications, or supporting user access, our team becomes an extension of yours, ensuring things run smoothly while you focus on strategic goals.

## Partnerships

Arctiq's success is built on strong partnerships with both our technology ecosystem and the communities we serve.

### Technology Partners

We work with leading providers such as Google Security Operations, Microsoft, Cisco, Dynatrace, Cloudflare, Red Hat, and CrowdStrike to bring proven, scalable, and secure technologies to tribal enterprises.

### Industry Collaboration

Arctiq is an active member of TribalHub, connecting tribal IT leaders and sharing best practices to strengthen technology adoption across Indian Country.

### Community Commitment

We approach every engagement with cultural sensitivity, long-term partnership, and a focus on delivering measurable benefits to tribal citizens and enterprises.

## Why Arctiq

With deep roots in infrastructure, security, and managed services, and a team dedicated to tribal enterprise, Arctiq helps organizations build, secure, and sustain technology that supports sovereignty and growth.
