ARCTIQ + Wiz

WIZ HEALTHCHECK

You own Wiz. Make sure you're getting everything you paid for.

In two weeks, Arctiq reviews your Wiz tenant and gives you a maturity score, a clear view of what's working and what isn't, and a prioritized plan to close the gaps. Ideal before a renewal, for a new security leader, or after an acquisition or cloud migration.

Fixed fee

No surprises

Duration	2 calendar weeks
Sessions	5 × 2 hours
Includes	Wiz Code, Cloud & Defend

What we assess

Viewed in Wiz checked in your Wiz tenant Q+A evaluated with your team

Twelve areas in Arctiq's three-stage Wiz approach, assessed across the products you've licensed and scored for overall maturity.

Stage 1
Turn On the Lights

Can you see everything you own?

Cloud coverage

Viewed in Wiz Q+A

All cloud accounts connected, new ones onboarded automatically, connectors healthy.

Workload coverage

Viewed in Wiz Q+A

Scans succeeding across VMs, containers, Kubernetes and serverless; sensor deployment.

Code coverage

Viewed in Wiz Q+A

Repositories, pipelines, registries and infrastructure-as-code connected and scanning.

Identity and permissions

Viewed in Wiz Q+A

Excessive permissions and risky identities across cloud, data and AI resources, and who created what.

Stage 2
Establish Operating Model

Do the right issues reach the right people?

Ownership and adoption

Viewed in Wiz Q+A

Resources tied to accountable teams; Wiz roles and SSO; licensed capabilities switched on and in use.

Issue prioritization

Viewed in Wiz Q+A

Policies, ignore rules and custom controls; is the critical queue signal or noise?

Issue routing

Viewed in Wiz Q+A

Ticketing, CMDB and messaging integrations that route each issue to its owner.

Reporting and compliance

Viewed in Wiz Q+A

Dashboards, compliance frameworks and scheduled reports for leaders and auditors.

Stage 3
Automate & Remediate

Is risk actually going down?

Remediation trends

Viewed in Wiz Q+A

Critical and high backlog, issue aging and time to fix, and how each is trending.

Workflows

Viewed in Wiz Q+A

Wiz Workflows and AI-assisted remediation: auto-remediation, integrations and AI coding agents, with human approval.

Prevention guardrails

Viewed in Wiz Q+A

CI/CD and admission-control policies that stop risky changes before they deploy.

Threat detection and response

Viewed in Wiz Q+A

Cloud and runtime detections, and their forwarding to your SOC.

How we score maturity

1 Initial	2 Developing	3 Defined	4 Managed	5 Optimized
Partial coverage; issues handled ad hoc.	Core coverage; ownership and triage informal.	Full coverage; integrations exist and work.	Fix times measured; automation meets your goals.	Guardrails prevent issues; AI-assisted remediation in use.

How it works

1 Kickoff — Set up

Grant read-only Wiz access and schedule the sessions.

→ **2 Assess** — Your Wiz tenant

Work through all twelve areas together, in Wiz and in conversation with your team.

→ **3 Deliver** — What you receive

Maturity scorecard: overall, per-stage and per-area scores.

Findings report: strengths, gaps and top risks, with evidence.

Prioritized roadmap: fixes ranked by impact and effort.

→ **4 Readout** — Your stakeholders

Walk your stakeholders through the results and agree next steps.
