

Mid-Market: Visibility and Empowerment

Wiz helps you “turn the lights on”.
Arctiq helps you with what comes next.

Better Together: Visibility Meets Guidance

Mid-market organizations often struggle with “alert fatigue”. Wiz provides immediate visibility, but visibility without context is simply noise. Arctiq serves as the “operational muscle”, taking Wiz’s visibility and turning it into operational outcomes. We help customers understand what’s important, decide how to handle it, and prevent the problem from recurring again, turning a tool into a vulnerability management program.

The Business Case: The Lights Are On...What Next?

The Scenario:

A global entertainment company deploys a Wiz proof of concept to provide unified vulnerability management across cloud, SaaS, and on-prem environments. Before Wiz, they would have seen literally hundreds of thousands of vulnerabilities with no context or indications of blast radius. The security team is overwhelmed: they have no idea who owns what, what to fix first, and how to stop the problem from growing or happening again.

The Wiz+Arctiq Solution:

Wiz provides full visibility and context. Then, Arctiq steps in to triage the initial findings. Together, we reduce the hundreds of critical issues to only a handful of high-priority risk cases and patterns, based on blast radius and risk. Arctiq then creates and implements custom dashboards that give each team a clear understanding of their own issues and the impact, and implements a program that defines ownership and manages the vulnerability risk and lifecycle. We follow up by making sure that Wiz lives where you work: building integrations and workflows that connect Wiz to change management systems to catalog the updates and status.

The Outcome:

The security team has a clear understanding of the scale and scope of the issues and root causes. They’re able to address the highest priority risks immediately, implement a process to remediate structural and process issues, and hold teams accountable for bad hygiene and shadow IT while giving them clear guidance on how to fix problems.

	Initial Triage & Assessment	Wiz Enablement	Resident Cloud Security Architect
What it is	Leveraging Wiz for rapid posture evaluation, Arctiq reviews the initial set of Wiz findings, helps the team prioritize risks based on true business impact, and provides specific guidance to remediate critical vulnerabilities.	Arctiq integrates Wiz with existing tools used by the customer, builds dashboards, fine-tunes notifications, and helps configure the right security controls.	A fractional resident resource acts as an extension of your team – managing the Wiz platform, overseeing the vulnerability management lifecycle, and triaging vulnerabilities.
Value	We rapidly transform a chaotic list of alerts into a clear remediation roadmap and realistic assessment of risk.	By integrating Wiz with the client’s daily workflows, we make sure that it’s being used in a way that works for the customer.	Our expertise takes away the most difficult aspects of the care-and-feeding of the Wiz platform and accelerates the security journey with real actionable outputs.

Enterprise: Scale Meets Integration

Integrate Wiz's security graph and powerful analysis engines with an existing vulnerability management ecosystem.

Better Together: An Ecosystem Partner

Wiz may scale technologically to cover multi-cloud environments of any scale, but large organizations primarily struggle with the human and process aspects of scale. Arctiq's key value is our ecosystem engineering expertise: we knit Wiz together with existing tools and organizational processes, helping teams break down silos and derive real value from tooling.

The Business Case: A Control Framework At Scale

The Scenario: A large financial organization has a comprehensive, existing vulnerability management program. They've acquired Wiz because of its cutting-edge visibility into their cloud estate, but the challenge isn't figuring out what to do with the signal – it's understanding how to get it to the right people at the right time and identifying ownership.

The Wiz+Arctiq Solution: Arctiq steps in as the "Wiz Strike Team". We bridge the gaps between vulnerability management, DevOps, and ITOps to integrate Wiz directly into CI/CD pipelines, ticketing systems, and notification platforms. We map cloud resources to their owners and customer controls to specific Wiz detections.

The Outcome: When Wiz detects a risk, the right team gets the alerts and evidence they need to remediate the problem. Compliance teams have access to dashboards and compliance reports that matter to them while software developers and cloud engineering teams get alerts and notifications that allow them to drive remediation using the tools they already use, reducing the time from meaningful misconfiguration to remediation.

	Ecosystem Integration & Enablement	Wiz Framework Mapping	Remediation Strike Teams
What it is	Embed Wiz into your existing toolchain. Drive your existing incident management and alerting processes with Wiz signal and ingest scanners and threat feeds into Wiz.	Map your existing vulnerability management framework – operating models, teams, and controls – into Wiz.	On-demand engineering power from Arctiq's platform engineering team to fix complex technical debt and harden your environment.
Value	Enrich Wiz's threat graph with the scanners and capabilities you already have, while translating Wiz's signal into automated action to reduce cost and increase velocity.	Wiz can generate an overwhelming number of findings in a large estate. Mapping Wiz to your existing framework means you see what you want to see when and where you want to see it – reducing effort and improving visibility.	Our automation-driven platform engineering practice allows customers to rapidly develop, test, and scale solutions that don't just fix individual issues – they provide processes that stop issues from occurring at all.

Ready to accelerate secure cloud development?

Partner with Arctiq and Wiz to gain the visibility, speed, and confidence you need to build at cloud scale.
